

# Senior UX Software Engineer

SmartWard is a young and dynamic enterprise looking to extend our team developing Care Management solutions for the Australian and international market.

We are seeking an experienced and versatile Senior UX Software Engineer with an emphasis on responsive touch- and mouse-based web application development. In particular, we are seeking someone with experience designing and building engaging, accessible, and easy to use applications. You will need a strong attention to detail, as we build critical information services. We are also looking to native development in the future, so experience there would be a bonus.

## We are offering:

- a great team and friendly atmosphere,
- involvement in an exciting new venture with a worthwhile mission,
- a mature software development process,
- flexible working hours.

You will be playing an important role working as part of an agile development team engineering a new and innovative care management system. This will include:

- involvement in the architecture and design of mission-critical software,
- coding of such software in Kotlin, Java, TypeScript and HTML/CSS to high quality standards,
- extensive unit testing and participation in code reviews,
- documentation of architecture, design and source code,
- providing guidance and mentoring to others with the potential to lead a team.

## We would like to hear from you if you:

- have 5+ years experience in developing cross-platform user experiences including mobile applications,
- are creative, focussed and motivated with great attention to detail,
- have experience in an object-oriented type-safe language such as Java or Swift,
- have excellent communication skills and strong problem solving abilities,
- have the desire to excel in what you do,
- have a desire and talent for mentoring others and provide direction,
- are able to work unsupervised and
- effectively as part of a team.

## Furthermore, we highly value:

- higher-level degree/Masters,
- experience in any of the aforementioned technologies,
- experience with native iOS and/or Android development,
- a design or visual arts background.
